

Did you know?

Using the correct pipe bedding class could save you a fortune

Plastic Flexible Pipe with full granular

Concrete Rigid Pipe

For further details visit www.cpaaustralia.com.au

Using the correct pipe bedding class could save you a fortune

Potential savings of \$145 per lineal metre*

*Figure is the difference between AS/NZS 2566 embedment configuration for flexible plastic pipe and H2 support for Concrete Rigid Pipe. Costs based on DN600 pipe. Potential cost savings are based on normal ground conditions and cost for granular bedding being \$85 per cubic meter** and cost of material being taken off site to landfill, being \$75 per cubic meter**. (figure shown is independent of pipe costs).
